

ISES is very happy to announce **two** webinars for the month of August, **including an exclusive members only webinar** and we invite you to register for both of them here:

Webinar I Members only:

Battery Storage in Off-Grid and On-Grid Power Systems - exclusively with ABENS and Tesla

Wednesday 22 August 2018 at 11:00 - 12:00 (GMT/UTC)

Check your local time on the registration page!

Registration is only available to ISES members. You want to join this special webinar but are not yet an ISES member? - follow the exact instructions [here](#)

Please note that registration for this webinar will close on Monday, the 20th of August at 24:00

We offer great membership deals for students, professionals, institutions and companies - see our homepage for the many benefits of an ISES membership - [ISES membership options](#)

For this exclusive webinar, ISES has invited Prof. João Tavares Pinho, president of the Brazilian Solar Energy Association (ABENS) and ISES board member from 2014-15, who will be giving his presentation on "The Role of Energy Storage in Off- and On-Grid Electric Power Systems" and will address his experience working in this field.

Joining into this discussion will be Mark Twidell, who since 2016, has been responsible for leading Tesla's growth into the Asia Pacific energy markets. Mr. Twidell will give his presentation on "Tesla's mission to accelerate the world's transition to sustainable energy and the role of battery storage" and report on their recent experiences in the field.

After the presentations, 30 minutes will be dedicated to audience questions, moderated by ISES board member and ISES immediate past president Monica Oliphant.

Webinar II - free for all to join

Geothermal Underground Storage for Solar Applications

Thursday 30 August 2018 at 12:00 - 13:00 (GMT/UTC)

Check your local time on the [registration page!](#)

With the summer being in full swing in Europe and the ISES HQ in Freiburg enjoying wonderful sunny days, winter seems to be far far away. But as we have learned, winter so very famously IS coming...

For this months webinar, ISES is very happy to announce that we will be having two expert speakers on the topic of geothermal underground storage solutions for solar applications joining us from Sweden, introducing us to technologies of saving and storing solar energy underground for these cold days to come.

But the benefits of this technique do not stop there – the stored energy can be used for cooling in warm climates just as well.

We will hear how the usage of the underground as a storage medium for thermal energy is a cost effective way to store large amounts of energy over longer periods and the presentations will give a picture of different underground thermal energy storage applications, their current use and potential around the world.

We will be joined by José Acuna and Signhild Gehlin introducing us to geothermal storage solutions as well as presenting the current R&D in this field of research, and we are especially happy to have the opportunity of ISES board member Viktoria Martin joining us as the moderator of this webinar. After the presentations, a 30 minutes Q&A session will be held.

This webinar is free for everybody to join and a recording of it as well as the presentations of the speakers will be made available to ISES members.
